

EPILEPSY

PT Management

By – Dr. Akshay Kumar PT

PT Management

- **The primary treatment of Epilepsy is done through the medicines like Anti-Epileptic drugs.**
- **Through physiotherapy, we can only enhance the quality of life and relaxation.**
- **Physiotherapy interventions in the case of epilepsy totally depends on the type of epilepsy in the patient and severity of the epilepsy.**
- **Some exercises/treatment of Epilepsy through physiotherapy are :**
 - **Relaxation Techniques**
 - **Yoga Asanas**
 - **Strengthening Exercises**
 - **Neck Muscle Stretching**
 - **Breathing Exercises**
 - **Back Stretch**

PT Management

- **Some exercises/treatment of Epilepsy through physiotherapy are :**
 - **Trunk Muscle Exercises**
 - **Balance exercise**
 - **Aerobic exercises like Running, Walking, Swimming, Cycling etc**
 - **Functional activities**
 - **If cognitive dysfunction is present, examine the patient and start the training for cognitive functions**
 - **In some cases, some injury also occurs secondary to the epilepsy attack. So, the physiotherapist should examine the patient for any dislocations, subluxations etc and their management should be started asap.**
 - **Educating the patient**
 - **Giving Home Exercise Plans (HEP)**

PT Management

- **HEP Includes :**
 - **Daily walking**
 - **Any sports activity**
 - **Meditation and Yoga**
 - **Running**
 - **Cycling**
 - **Further, depends on the patient**
