• Factors affecting Total body relaxation:-

- Room temp.
- Patient clothing
- Room light
- " air circulation.

• Mental Relaxation:

- Plays main role while treating patient and to render good service.
- Can be achieved with help of above positions and some other factors like room color etc.
- Normally, mild color gives mental peace, so dark should be avoided.
- The therapist should gain confidence of patient by explaining about condition, treatment process and necessity.
- Psychological state of patient is very imp.
- Noisy surrounding should be avoided.
- Therapist manner should be courteous.

• Local Relaxation:

- ~~Relax~~ Relaxing particular part of body.
- Can be done by
 - Massage
 - Relaxed passive motion
 - Supporting the part
 - Applying pain relaxing modalities.
